# GreetingStudio Scale Calibration Test Page

Verify that your printer outputs at 100% actual size before printing envelope dielines.

## Verification Steps:

1. Take a physical ruler and measure the left box: it must be exactly 1 inch on all four sides.
2. Measure the right box: it must be exactly 25 millimeters on all four sides.
3. If the measurements are smaller or larger, ensure your printer dialog scale is set to ’100%’ or ’Actual Size’.
